## IN THE CLAIMS:

- 1. (Currently amended) A multicomponent superabsorbent particle comprising at least one microdomain of at least one first water-absorbing resin in contact with or in close proximity to at least one microdomain of at least one second water-absorbing resin, wherein the first and second water-absorbing resins, independently, are neutralized 0% greater than 25% to 50%, by weight.
  - 2. Cancelled.
- 3. (Original) The particles of claim 1 comprising at least one microdomain of at least one basic water-absorbing resin dispersed in a continuous phase of at least one second water-absorbing resin.
- 4. (Original) The particles of claim 1 comprising at least one microdomain of at least one second water-absorbing resin dispersed in a continuous phase of at least one basic first resin.
- 5. (Original) The particles of claim 1 further comprising a matrix resin.
- 6. (Original) The particle of claim 1 wherein the first resin comprises a basic water-absorbing resin, and the second resin comprises an acidic water-absorbing resin.

- 7. (Original) The particle of claim 6 wherein the basic resin comprises a strong basic resin, and the acidic resin comprises a strong acidic resin, a weak acidic resin, or a mixture thereof.
- 8. (Original) The particle of claim 6 wherein the basic resin comprises a weak basic resin, and the acidic resin comprises a strong acidic resin, a weak acidic resin, or a mixture thereof.
- 9. (Original) The particle of claim 1 having a weight ratio of first resin to second resin of about 90:10 to about 10:90.
- 10. (Original) The particle of claim 1 containing about 50% to 100%, by weight, of first resin plus second resin.
- 11. (Original) The particle of claim 1 wherein the particle is about 10 to about 10,000 microns in diameter.
- 12. (Original) The particle of claim 6 wherein the basic resin, the acidic resin, or both, are surface crosslinked with up to about 1% by weight of the particle of a surface crosslinking agent.
- 13. (Original) The particle of claim 1 wherein the particle is surface crosslinked with up to about 10,000 ppm of a surface crosslinking agent.

- 14. (Original) The particle of claim 6 wherein at least 6% of the monomer units comprising the basic resin are basic monomer units.
- 15. (Original) The particle of claim 6 wherein the basic resin is selected from the group consisting of a poly(vinylamine), a poly(dialkylamino-alkyl (meth)acrylamide), a polymer prepared from the ester analog of an N-(dialkyamino(meth)acrylamide), a polyethylenimine, a poly(vinylguanidine), a poly-(dimethyldialkyl-ammonium hydroxide), a guanidine-modified polystyrene, a quaternized polystyrene, a quaternized polystyrene, a quaternized poly(meth)-acrylamide or ester analog thereof, poly(vinyl alcohol-co-vinylamine), and mixtures thereof.
- 16. (Original) The particle of claim 6 wherein the acidic resin contains a plurality of carboxylic acid, sulfonic acid, sulfuric acid, phosphonic acid, or phosphoric acid groups, or a mixture thereof.
- 17. (Original) The particle of claim 6 wherein at least 10% of the monomer units comprising the acidic resin are acidic monomer units.

- wherein the acidic resin is selected from the group consisting of polyacrylic acid, a hydrolyzed starch-acrylonitrile graft copolymer, a starch-acrylic acid graft copolymer, a saponified vinyl acetate-acrylic ester copolymer, a hydrolyzed acrylonitrile polymer, a hydrolyzed acrylonitrile polymer, a hydrolyzed acrylamide copolymer, an ethylene-maleic anhydride copolymer, an isobutylene-maleic anhydride copolymer, a poly(vinylphosphonic acid), a poly(vinyl-sulfonic acid), a poly(vinylphosphoric acid), a poly-(vinyl-sulfuric acid), a sulfonated polystyrene, and mixtures thereof.
- 19. (Original) The particle of claim 5 comprising 25% to 50%, by weight, of a matrix resin.
- 20. (Original) The particle of claim 5 wherein the matrix resin comprises a hydrophilic resin.
- 21. (Original) An article comprising a multicomponent superabsorbent particle of claim 1.
- 22. (Original) The article of claim 21 wherein the article is a diaper or a catamenial device.
- 23. (Original) A method of absorbing an aqueous medium comprising contacting the medium with a particle of claim 1.
- 24. (Original) A method of claim 23 wherein the aqueous medium contains electrolytes.

- 25. (Original) A method of claim 24 wherein the electrolyte-containing aqueous medium is selected from the group consisting of urine, saline, menses, and blood.
- 26. (Currently amended) A superabsorbent material comprising a blend of:
- (a) multicomponent superabsorbent particlesof claim 1; and
- (b) particles of a third water-absorbing resin selected from the group consisting of an acidic water-absorbing resin, a basic water-absorbing resin, and mixtures thereof.
- 27. (Original) The superabsorbent material of claim 26 wherein the multicomponent superabsorbent particles are present in an amount of about 10% to about 90%, by weight, of the material.
- 28. (Original) The superabsorbent material of claim 26 wherein the third water-absorbing resin has a degree of neutralization from 0 to 70.
- 29. (Original) The superabsorbent material of claim 26 wherein the third water-absorbing resin comprises an acidic water-absorbing resin.
- 30. (Original) The superabsorbent material of claim 26 wherein the third water-absorbing resin comprises a basic water-absorbing resin.

- 31. (Original) The superabsorbent material of claim 26 having an absorption under load at 0.7 psi of at least about 20 grams of 0.9% saline per gram of particles, after one hour, and at least about 30 grams of 0.9% saline per gram of particles after three hours.
- 32. (Original) The superabsorbent material of claim 26 having a saline flow conductivity value of greater than  $15 \times 10^{-7}$  cm3sec/g.
- 33. (Original) The superabsorbent material of claim 26 having an initial performance under pressure capacity rate of greater than 40  $g/g/hr^{1/2}$ .
- 34. (Original) The superabsorbent material of claim 26 having a free swell rate greater than 0.30 g/g/sec.
- 35. (Currently amended) An article comprising superabsorbent material of claim  $\frac{25}{26}$ .
- 36. (Original) The article of claim 35 wherein the article is a diaper or a catamenial device.

- 37. (Currently amended) A diaper having a core, said core comprising at least 15% by weight of multicomponent superabsorbent particles, wherein each multicomponent superabsorbent particle comprises at least one microdomain of a first water-absorbing resin in contact with or in close proximity to at least one microdomain of a second water-absorbing resin, and wherein the first and second water-absorbing resins of the multicomponent superabsorbent particles, independently, are neutralized 0% greater than 25% to 50%, by weight.
- 38. (Original) The diaper of claim 37 wherein the core has an acquisition rate for 100 milliliters of 0.9% saline under a load of 0.7 psi greater than two milliliters/second.
- 39. (Original) The diaper of claim 38 wherein the core has an acquisition rate for a subsequent 50 milliliters of 0.9% saline of greater than two milliliters/second.
- 40. (Original) The diaper of claim 39 wherein the core has an acquisition rate for a second subsequent 50 milliliters of 0.9% saline of greater than two milliliters/second.
- 41. (Original) The diaper of claim 36 wherein the core comprises at least 75% by weight multicomponent superabsorbent particles.

- 42. (Original) The diaper of claim 37 wherein the core comprises 100% by weight multicomponent superabsorbent particles.
- 43. (Original) The diaper of claim 37 further comprising a topsheet in contact with a first surface of the core, and a backsheet in contact with a second surface of the core, said second core surface opposite from said first core surface.
- 44. (Original) The diaper of claim 43 further comprising an acquisition layer disposed between the topsheet and the core.
- 45. (Original) The diaper of claim 43 wherein the diaper is free of an acquisition layer.
- 46. (Original) A diaper having a core, said core comprising at least 15% by weight of a superab-sorbent material of claim 26.
- 47. (Original) The diaper of claim 46 wherein the core has an acquisition rate for 100 milliliters of 0.9% saline under a load of 0.7 psi of greater than two milliliters/second, and has an acquisition for a first, second, and third subsequent 50 milliliters of 0.9% saline under a load of 0.7 psi of greater than two milliliters/second.
- 48. (Original) The diaper of claim 46 wherein the core comprises at least 50% by weight of the superabsorbent material of claim 1.

- 49. (Original) The diaper of claim 46 wherein the core comprises at least 75% by weight of the superabsorbent material of claim 1.
- 50. (Original) The diaper of claim 46 wherein the core comprises 100% by weight of the superabsorbent material of claim 1.
- 51. (Original) The diaper of claim 46 further comprising a topsheet in contact with a first surface of the core, and a backsheet in contact with a second surface of the core, said second core surface opposite from said first core surface.
- 52. (Original) The diaper of claim 46 further comprising an acquisition layer disposed between the topsheet and the core.
- 53. (Original) The diaper of claim 46 wherein the diaper is free of an acquisition layer.
- 54. (Original) A method of increasing an acquisition rate and decreasing an acquisition time of a diaper core in an absorption of a liquid comprising substituting at least 15% by weight of a superabsorbent polymer present in the diaper core with multicomponent superabsorbent particles of claim 1.
